QUALITATIVE IN-DEPTH ANALYSIS OF LINKAGES AND CASE STUDIES

The objective of this WP is to enrich project results with a deep context-based analysis in selected countries and supply chains. It will also assess different views of countries and interest groups with regard private voluntary standards and their relationship with trade rules. The WP will be characterized by an intensive cooperation with stakeholders and results will reflect the views of producers, processors, traders and NGOs on possible future changes in farming practices, policies and institutional environment. This work will steer better the quantitative modelling towards the priorities of users.

LEADER: University of Kent

The University is one of the country's leading academic institutions producing world-class research, rated internationally excellent and leading the way in many fields of study. They are a forward-thinking research institution, committed to the transformative power of education and research and to the development and support of our students and staff.
