

# COHERENCE ANALYSIS OF EU POLICY FRAMEWORKS

The overall aim of WP5 is to explore, analyse and facilitate the coherence of the current EU trade-related policies and to assess the feasibility of new policy options able to improve it. The indicators identified in WP1, and the results of the quantitative (WP3) and qualitative (WP4) analyses of the sustainability impacts of agricultural trade will provide entry points for the examination of policy coherence in the case study countries/regions as well as in the EU to contribute to the achievement of the global sustainability objectives.

Researchers and specialists working in Luke provide new solutions towards the sustainable development of the Finnish bioeconomy and the promotion of new biobased businesses. Together with their partners we will build a society based on bioeconomy. They bring together experts in natural resources and sustainable food production. Luke also carries out statutory government work.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 101000551
