

# Visual dashboard of the linkages between sustainable development and agri-food trade

Data source: **reference to D1.1.**

**Legal notice:** this dashboard was prepared in the framework of the TRADE4SD project, which received funding from the European Union Horizon 2020 research and innovation programme under grant agreement No 101000551. The dashboard is constantly updated based on the WP3 and WP4

Trade liberalisation can directly and indirectly contribute to economic growth. Economic sustainability has been predominant in the analyses according to the database of 224 journal articles relating to the overall international trade of products and services.

## ECONOMIC DIMENSION

Markets and Value chains

Policies and governance

Economic development & Growth

One of the central issues analysed by the economic literature is related to markets and value chains, whereby agri-food trade has different impacts on related SDGs.

Trade-led economic growth enhances a country's income-generating capacity, which is one of the most important prerequisites for achieving sustainable development.

Mainstreaming trade requires a joint effort to integrate trade into the various dimensions of economic policy making.

**SOCIAL  
DIMENSION**

**ENVIRONMENTAL  
DIMENSION**

Trade also plays a crucial role in addressing the social challenges of sustainability like hunger, food security, healthy lives, wellbeing, or employment. Both developed and developing countries benefit from trade and thanks to the trade gains, developing countries have experienced an unprecedented growth of the middle class despite the fact that their share in world trade is still low.

**SOCIAL  
DIMENSION**

**FOOD &  
NUTRITION  
SECURITY**

**LIVELIHOODS  
&  
WELLBEING**

**LABOUR &  
EMPLOYMENT**

The ever-increasing population growth and the increased risk of epidemics pose new societal challenges, perhaps the most important of which is food and nutrition security.

Although agricultural employment is relatively low compared to total employment in developed countries, agriculture remains the largest source of employment in many developing countries, having mixed impacts on the relationship between agri-food trade and the SDGs.

Many aspects of international trade can contribute to livelihood and wellbeing, directly to SDG 3 (Good Health and Well-being), or through reaching the targets of other SDGs

**ECONOMIC  
DIMENSION**

**SOCIAL  
DIMENSION**

**ENVIRONMENTAL  
DIMENSION**

Trade undoubtedly impacts the environment through many channels starting from input use, production, processing, packaging, and transportation. Efforts to understand these impacts are crucial in achieving sustainable development.

**ENVIRONMENTAL  
DIMENSION**

**Biodiversity**

**Renewable  
energy**

**GHG emissions,  
pollution &  
deforestation**

**Agri-food trade has different impacts on biodiversity. In all related SDGs, both direct and indirect as well as positive and negative linkages were identified by the literature.**

**Agri-food trade also have very different impacts on GHG emissions, pollution, and deforestation, with all environmental-related SDGs highly related.**

**Switching from non-renewable sources to renewable ones also result in mixed trade-related impacts.**
